(54) Title: A METHOD FOR COMMUNICAION NETWORK PERFORMANCE ANALYSIS

(57) **Abstract:** The present invention relates to a method for communication network parameter setting comprising the steps of a) acquiring and storing information related to a1) service requests issued by terminals attached to said network, a2) positions of said terminals, and a3) establishment of the requested service for said terminals, b) matching, based on the position information, said information to a grid of unit areas, the grid of unit areas representing a geographical region in which said network is operated, c) processing said information per unit area, d) outputting said processed information and e) modifying communication network operating parameters based on said outputted processed information.
